

1. Which impact of volcanic eruptions causes problems for society?

- ☐ A Red Sunset
- ☐ B Pollution
- ☐ C Cyclones
- ☐ D Tsunamis

2. 225 million years ago, all continents were joined to form a super continent called:

- ☐ A Pangaea.
- ☐ B Gondwana
- ☐ C Laurasia
- ☐ D Tethys

3. Which of the following layers of the Earth is solid and comprised mostly of iron?

- ☐ A Crust
- ☐ B Mantle
- ☐ C Outer core
- ☐ D Inner Core

4. Which of the following can be explained by the theory of plate tectonics?

- ☐ A The slow movement of the continents
- ☐ B The San Andreas fault
- ☐ C The growth of the Himalayas
- ☐ D All of the above

5. A subduction zone is formed when:

- ☐ A two plates slide past each other.
- ☐ B an oceanic plate slides under a continental plate.
- ☐ C two plates move apart from each other.
- ☐ D All of the above.

6. Which of the following events do not take place in the Earth's crust?

- ☐ A Convection currents
- ☐ B Earthquakes
- ☐ C Faulting

☐ D Folding

7. The folding process is caused by:

- ☐ A the bending of rock as a result of forces beneath the surface.
- ☐ B a crack in rocks due to the forces beneath the surface.
- ☐ C the slipping of blocks of crust past each other.
- ☐ D the action of volcanoes and earthquakes.

8. Synclines and anticlines are examples of:

- ☐ A faults.
- ☐ B folds.
- ☐ C horsts.
- ☐ D ocean ridges.

9. Select the true statement from the following.

- ☐ A Continental crust is thicker than oceanic crust.
- ☐ B Continental crust is denser than oceanic crust.
- ☐ C Subduction zones occur where two plates of continental crust collide.
- ☐ D Sliding plates occur along the west coast of South America.

10. Which of the following features of the Earth have been caused by folding?

- ☐ A The Grand Canyon
- ☐ B The Himalayas
- ☐ C The San Andreas Fault
- ☐ D Yorke Peninsula, South Australia

11. A volcano is said to be extinct if it:

- ☐ A is erupting or may erupt at any time.
- ☐ B is not active, but may erupt again in the future.
- ☐ C has shown no sign of erupting for at least ten years.
- ☐ D has shown no signs of erupting for thousands of years.

12. Many volcanoes are found at the boundaries of tectonic plates.

- ☐ A True
- ☐ B False

13. A dormant volcano is not active, but may erupt again.

- ☐ A True
- ☐ B False

14. What is lava and how is it different from magma?

15. Complete the following sentence.

Mid-ocean ridges form when spews up to the surface between plates that are

- ☐ (A) lava; folding
- ☐ (B) magma; diverging
- ☐ (C) magma; subduction
- ☐ (D) lava; faulting

16. List four different impacts of earthquakes.

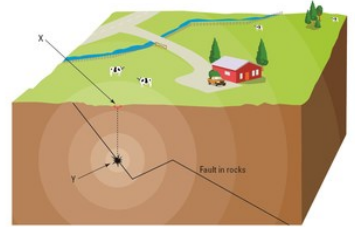

17. Add the correct description to the Richter magnitude for earthquakes effects from the list below.

- A = Great earthquake
- B = Can be noticed by humans
- C = Can be destructive over a 100 km wide area
- D = Detectable by seismometer
- E = Objects on shelves may rattle or fall down

Richter magnitude Description of effects (A, B, C, D or E)

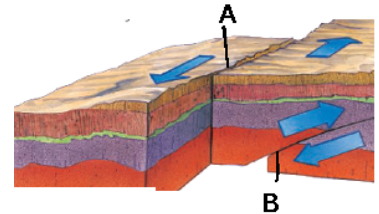

1.0
2.0
5.0
6.5
9.0

18. An earthquake has occurred and two points are labelled in the diagram. Identify X and Y.

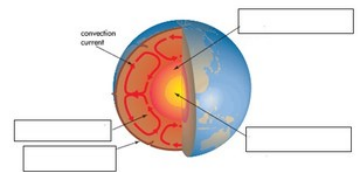

19. Identify the two geological features labelled A and B

- (A) A= reverse fault
B= divergent fault
- (B) A = forward fault
B = reverse fault
- (C) A = slip-strike fault
B = reverse fault

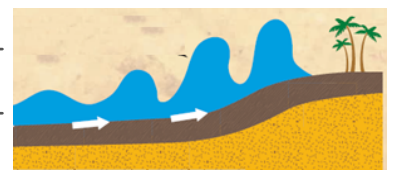

20. Name in order from the four layers of the Earth (from inside out).

21. The following diagram shows tsunami waves approaching the coast.

(a) Identify the cause of the tsunamis.

(b) Explain why the wave height gets greater near the shore.

22. The following map shows the location of volcanoes near Australia.

(a) Explain why the volcanoes are found in these locations.

(b) Explain why there are no active volcanoes in Australia.
