

Science understanding

 Logical/mathematical  Visual/spatial

- 1 Use the table and diagrams to help you create a food web. Write the names of the organisms and connect them with arrows to show the direction in which food and energy passes. Draw your food web on page 118.

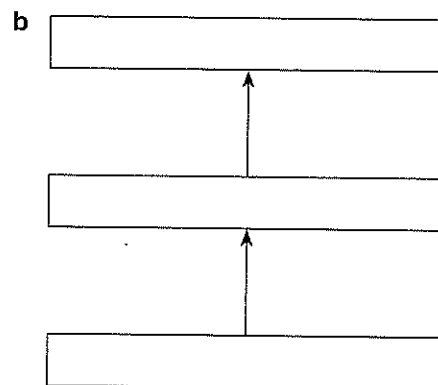

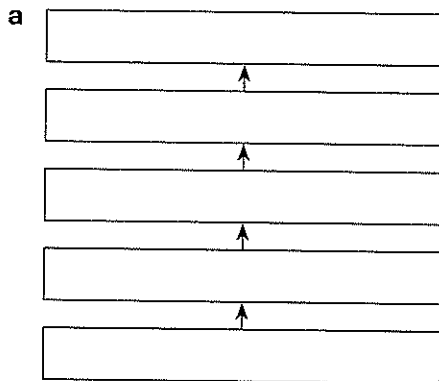

Organism	Food
Long-necked tortoise 	Snails, mosquito larvae, dragonfly larvae, tadpoles, caddis fly larvae, small fish
Caddis fly larva 	Pondweed
Mosquito larva 	Pondweed
Tadpole 	Pondweed
Dragonfly larva 	Caddis-fly larvae
Small fish 	Dragonfly larvae, mosquito larvae
Heron 	Small fish, tadpoles
Snail 	Pondweed
Pondweed 	Photosynthesis

Construct your food web here.

- 2 **Explain** where and how energy enters this food web.

- 3 Choose any organism in the web and **explain** how the non-living surroundings may affect the organism in its environment.

- 4 From the web, **draw** one food chain with *five* levels in it. Draw another food chain with *three* levels.

- 5 Choose one of your food chains from question 4. **Describe** what happens to the amount of energy in the food passing along the chain.

- 6 **Draw** the approximate shape of a pyramid of biomass for any three-level food chain in the food web. (No actual masses are needed.)
