

Chemistry Revision - What do you know?

YOUR QUEST

Do you have the inside information?

All substances are made up of tiny particles. You probably already know quite a lot about the particles inside substances. This knowledge is the first step in your quest to find out why substances behave the way they do.

THINK

Answer the questions below to find out how much you already know about the inside story on substances.

- 1 The substances around you and inside you can be placed into three groups — elements, compounds and mixtures.
 - (a) Which one of these groups contains substances that are made up of only one type of atom?
 - (b) Which one of these groups is the least likely to be found naturally in the Earth's crust?
 - (c) What is the difference between a compound and a mixture?
 - (d) Arrange the substances listed below into the three groups of substances to complete the affinity diagram below.

2 Elements, compounds and mixtures are made up of tiny particles called atoms and molecules.

- (a) How is a molecule different from an atom?
- (b) List two elements that can be made up of molecules.
- (c) List two compounds that are made up of molecules.
- (d) Name one compound that is not made up of molecules.

3 Name three particles found inside an atom.

4 Which of the diagrams below represents:

- (a) an atom of an element
- (b) a molecule of an element
- (c) a molecule of a compound?

SUBSTANCES		
Elements	Compounds	Mixtures
gold diamond air copper ammonia pure water sodium hydroxide	carbon dioxide sea water chocolate thick shake table salt concentrated hydrochloric acid brass calcium oxygen	blood iron soil
