

Science understanding

Verbal/linguistic

1 Rearrange the jumbled word letters to **identify** a science word that matches each clue.

Jumbled word	Clue	Answer
nothersheepas	A layer of 'plastic' semi-solid rock in the upper mantle	<i>asthenosphere</i>
fingirt	Process of continents breaking up, subsiding and allowing the sea in	
docunubits	Areas where the crust is sinking down into the Earth	
sotopmice	Volcano that may explode with great force due to the magma being very thick and containing a lot of gas	
gongnervoc	Boundary where plates are colliding	
toh stop	Isolated places away from plate boundaries where a lot of hot magma is being created	
recipeten	The point on the Earth's surface directly above the focus	
ucofs	The place where the quake starts below ground	
teemissomer	An instrument for detecting the seismic waves from an earthquake	
nusmati	A huge wave in the ocean caused by an undersea earthquake	

2 **Recall** the word that matches each clue.

Clue	Word
When continents separate and drift across the oceans	<i>c o n t i n e n t a l d r i f t</i>
Theory that the Earth's crust is cracked into many large pieces that move on the asthenosphere	<i>p _ _ t _ _ t _ _ t _ _ _ c _ _</i>
New crust being formed at the ocean ridges and spreading outwards	<i>s _ _ f _ _ _ r s _ r _ _ d _ _ _ g</i>
The crust forming the continents	<i>_ o _ _ i _ _ n t _ _ _</i>
Chain of islands formed at the edges of colliding tectonic plates where one plate subducts	<i>i _ _ _ _ d _ r _ _</i>
Longitudinal seismic waves that travel fast through the Earth	<i>p _ _ m _ _ _ y w a v e s</i>
The shaking, wavelike movement of the ground in an earthquake	<i>s _ _ _ m _ c w _ _ e</i>
Transverse seismic waves that travel through the Earth	<i>s _ _ _ _ d _ _ _ y w a v e s</i>
