

1. autonomic	In the peripheral nervous system the _____ system controls involuntary actions.	18. synapse	A _____ is a small space across which an impulse travels to move from one neuron to another.
2. axon	What is the branch part of the neuron that transports messages away from the cell body?	19. touch	Nerve cells do not _____ each other, yet still pass impulses to each other.
3. brain	The _____ coordinates all of your body activities.		
4. central	The _____ nervous system is made up of the brain and spinal cord.		
5. dendrite	What is the branch part of the neuron that receives messages and sends them to the cell body?		
6. interneurons	Nerve cells that relay impulses from sensory nerve cells to motor nerve cells are called _____.		
7. motor	Nerve cells that conduct impulses from the brain to muscles and glands throughout your body are called _____ neurons.		
8. neuron	A _____ is made up of a cell body, dendrite, and axon.		
9. Neurotransmitter	When an impulse reaches the end of an axon, the axon releases a chemical called a _____.		
10. paralysis	Injury to the spine can result in loss of muscle movement called _____.		
11. peripheral	The _____ nervous system is made up of all the nerves outside the brain and spinal cord.		
12. reflex	A _____ is an involuntary, autonomic response to a stimulus controlled by the spinal cord.		
13. sensory	Nerve cells that receive information and send impulses to the brain or spinal cord are called _____ neurons.		
14. skin	For your sense of touch sensory receptors are found in _____. These sensory receptors can pick up changes in touch, pressure, pain, and temperature.		
15. somatic	In the peripheral nervous system the _____ system controls voluntary actions.		
16. spinal cord	Which part of the body is made up of bundles of neurons that carry impulses from all parts of the body to the brain and from the brain to all parts of the body?		
17. stimuli	The senses act as the body's alert system, reacting to _____ and transmitting impulses to the brain.
