

How does a tree diagram help to list the sample space and calculate probabilities?

A tree diagram is used to list the outcomes of multiple events.

What does a
tree diagram
look like
(2 events)

Three coins are flipped

How do I use a tree diagram to calculate probabilities?

e.g. $\Pr(HHH) = \frac{1}{8}$ only one possibility out of 8 outcomes.

$$\Pr(\text{at least 2 heads}) = \frac{4}{8} = \frac{1}{2}$$
