

Ratio of a Quantity - Method 1 (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 2 - LICENSED FOR NON-COMMERCIAL USE

 Divide these quantities into the number of equal parts specified.	9 Divide 798 kg in the ratio 3 : 4.	 Now three valued ratios.
1 Divide 558 m into 6 equal parts. $\square \div \square = \square$ m	Add parts: $\square + \square = \square$ parts Find 1 part: $\square \div \square = \square$	13 Divide 7.28 kg into the ratio 3 : 7 : 4. Answer in grams.
2 Divide \$172.40 into 4 equal parts.	Find 3 parts: $\square \times \square = \square$ Find 4 parts: $\square \times \square = \square$	Add parts: _____ 1 part: _____
3 Divide 1 125 g into 12 equal parts.	Write ratio: $\square$ kg : $\square$ kg	3 parts: _____ 7 parts: _____
4 Divide 6.32 L into 8 equal parts. Give your answer in mL.	Check: $\square + \square = 798$	4 parts: _____ Ratio: _____
These will use multiplication. Given 1 part, find the quantity.	10 Divide 1 590 mL in the ratio 11 : 4.	Check
5 If 1 part is 18 kg, find the mass for 15 parts.	Add parts: $\square + \square = \square$ parts 1 part: $\square \div \square = \square$ 11 parts: $\square \times \square = \square$ 4 parts: $\square \times \square = \square$	14 Divide 97.5 cm into the ratio 6 : 3 : 4. Answer in mm.
6 If 1 part is 42 s, find the time (min/s) made from 6 parts.	Ratio: $\square : \square$ Check: $\square + \square = 1\ 590$	
7 If 1 part is 26 cm, find the length (m) made from 38 parts.	11 Divide 3.4 T in the ratio 2 : 3. Answer in kg.	
Now ratios, follow the steps to find 1 part then the divided quantity.	Add parts: $\square + \square = \square$ parts 1 part: $\square \div \square = \square$ 2 parts: $\square \times \square = \square$ 3 parts: $\square \times \square = \square$	
8 Divide \$168 in the ratio 5 : 3.	Ratio: $\square : \square$ Check: $\square + \square = \square$	
Add parts: $5 + 3 = \square$ parts Find 1 part: $168 \div \square = \\$	12 Divide \$49.05 into the ratio 7 : 2.	
Find 5 parts: $\square \times 5 = \\$ Find 3 parts: $\square \times 3 = \\$	Add parts: _____ 1 part: _____ 7 parts: _____ 2 parts: _____	
Write ratio: $\\$: \\$ Check: $\square + \square = 168$	Ratio: _____ Check: _____	15 Divide 1.06 km into the ratio 2 : 5 : 1. Answer in m.

Ratio of a Quantity - Method 1 (Sheet 1)

© FREEFALL MATHEMATICS - FREEFALL MATHEMATICS ALTITUDE BOOK 2 - LICENSED FOR NON-COMMERCIAL USE

 Divide these quantities into the number of equal parts specified.

1 Divide 558 m into 6 equal parts. $558 \div 6 = 93 \text{ m}$

2 Divide \$172.40 into 4 equal parts. $172.40 \div 4 = \$43.10$

3 Divide 1 125 g into 12 equal parts. $1\ 125 \div 12 = 93.75 \text{ g}$

4 Divide 6.32 L into 8 equal parts. Give your answer in mL.
 $6\ 320 \div 8 = 790 \text{ mL}$

These will use multiplication. Given 1 part, find the quantity.

5 If 1 part is 18 kg, find the mass for 15 parts.
 $18 \times 15 = 270 \text{ kg}$

6 If 1 part is 42 s, find the time (min/s) made from 6 parts.
 $42 \times 6 = 252 \text{ s} = 4 \text{ min } 12 \text{ s}$

7 If 1 part is 26 cm, find the length (m) made from 38 parts.
 $26 \times 38 = 988 \text{ cm} = 9.88 \text{ m}$

Now ratios, follow the steps to find 1 part then the divided quantity.

8 Divide \$168 in the ratio 5 : 3.

Add parts: $5 + 3 = 8$ parts

Find 1 part: $168 \div 8 = \$21$

Find 5 parts: $21 \times 5 = \$105$

Find 3 parts: $21 \times 3 = \$63$

Write ratio: $\$105 : \63

Check: $105 + 63 = 168$

9 Divide 798 kg in the ratio 3 : 4.

Add parts: $3 + 4 = 7$ parts

Find 1 part: $798 \div 7 = 114 \text{ kg}$

Find 3 parts: $114 \times 3 = 342 \text{ kg}$

Find 4 parts: $114 \times 4 = 456 \text{ kg}$

Write ratio: $342 \text{ kg} : 456 \text{ kg}$

Check: $342 + 456 = 798$

10 Divide 1 590 mL in the ratio 11 : 4.

Add parts: $11 + 4 = 15$ parts

1 part: $1\ 590 \div 15 = 106 \text{ mL}$

11 parts: $106 \times 11 = 1\ 166 \text{ mL}$

4 parts: $106 \times 4 = 424 \text{ mL}$

Ratio: $1\ 166 \text{ mL} : 424 \text{ mL}$

Check: $1\ 166 + 424 = 1\ 590$

11 Divide 3.4 T in the ratio 2 : 3. Answer in kg.

Add parts: $2 + 3 = 5$ parts

1 part: $3\ 400 \div 5 = 680 \text{ kg}$

2 parts: $680 \times 2 = 1\ 360 \text{ kg}$

3 parts: $680 \times 3 = 2\ 040 \text{ kg}$

Ratio: $1\ 360 \text{ kg} : 2\ 040 \text{ kg}$

Check: $1\ 360 + 2\ 040 = 3\ 400$

12 Divide \$49.05 into the ratio 7 : 2.

Add parts: $7 + 2 = 9$ parts

1 part: $49.05 \div 9 = \$5.45$

7 parts: $5.45 \times 7 = \$38.15$

2 parts: $5.45 \times 2 = \$10.90$

Ratio: $\$38.15 : \10.90

Check: $38.15 + 10.90 = 49.05$

 Now three valued ratios.

13 Divide 7.28 kg into the ratio 3 : 7 : 4. Answer in grams.

Add parts: $3 + 7 + 4 = 14$ parts

1 part: $7\ 280 \div 14 = 520 \text{ g}$

3 parts: $520 \times 3 = 1\ 560 \text{ g}$

7 parts: $520 \times 7 = 3\ 640 \text{ g}$

4 parts: $520 \times 4 = 2\ 080 \text{ g}$

Ratio: $1\ 560 \text{ g} : 3\ 640 \text{ g} : 2\ 080 \text{ g}$

Check: $1\ 560 + 3\ 640 + 2\ 080 = 7\ 280 \text{ g}$

14 Divide 97.5 cm into the ratio 6 : 3 : 4. Answer in mm.

Add parts: $6 + 3 + 4 = 13$ parts

1 part: $975 \div 13 = 75 \text{ mm}$

6 parts: $75 \times 6 = 450 \text{ mm}$

3 parts: $75 \times 3 = 225 \text{ mm}$

4 parts: $75 \times 4 = 300 \text{ mm}$

Ratio: $450 \text{ mm} : 225 \text{ mm} : 300 \text{ mm}$

Check: $450 + 225 + 300 = 975$

15 Divide 1.06 km into the ratio 2 : 5 : 1. Answer in m.

Add parts: $2 + 5 + 1 = 8$ parts

1 part: $1\ 060 \div 8 = 132.5 \text{ m}$

2 parts: $132.5 \times 2 = 265 \text{ m}$

5 parts: $132.5 \times 5 = 662.5 \text{ m}$

Ratio: $265 \text{ m} : 662.5 \text{ m} : 132.5 \text{ m}$

Check: $265 + 662.5 + 132.5 = 1\ 060 \text{ m}$
