

11 PHYSICS ATAR

INVESTIGATION - DENSITY OF PAPER

Aim: To determine the density of a sheet of file paper.

- Method:**
1. Select a piece of A4 photocopy paper.
 2. *Remember to record all uncertainties in your measurements.*
 3. Measure the following.
 - Mass of the paper.
 - Length, width and thickness of the paper as accurately as possible.
 4. Calculate the volume of paper present. Set your working out clearly.
 5. Calculate the density of the paper using $D = \frac{m}{V}$.

Results: Record your results and working in a suitable format.

Discussion: Consider any factors that have affected your collection of data.

Conclusion: State a suitable conclusion.
