

AIM To determine g by ----

BACKGROUND

- Mention Galileo + his work. (1)
- Relationship found (1)
- Other point of interest. (1)

METHOD

- Experimental set-up. (1)
- Relationship investigated (1)
- Method is logical. (1)
- Repeated trials (1)

RESULTS

- Headings + units at top of columns. (1)
- Appropriate columns (must have T, T^2) (1)
- Correct significant figures. (1)

GRAPH

- Correct labels on axes (with units) (2)
- Plotting. (1)
- Line of best fit. (1)

GRADIENT

- Use 2 points of line of best fit. (1)
- Correct calculation. (1)
- Correct significant figures. (1)
- Correct units. (1)

CALCULATION

- Calculation of g using gradient (2)

DISCUSSION

- Identify possible sources of error - at least one. (1)
- Suggestions for improvements or how errors were controlled. (1)

CONCLUSION

- Statement that addresses the aim. (1)
