

YEAR 11 PHYSICS ATAR
Investigation 3.2 - Specific Heat of a Metal
Marking Rubric

NAME: _____

		Marks Allocated	Mark
Aim	Clear aim given.	1	
Method	Refers to laboratory manual for method or gives a suitable method.	1	
Results	Suitable table or similar.	3	
	Correct units		
	Correct significant figures.		
Calculations	Correct setting out.	3	
	Correct calculation.		
	Correct units and significant figures.		
Discussion	Q4 Comparison to accepted value. % difference calculated.	2	
	Q5 Sources of greatest error. e.g. Poor insulation means loss of heat.	1	
	Q6 Reducing error (2 suggestions) e.g. Bigger mass of metal; better insulation.	2	
	Q7 Dry metal - otherwise H ₂ O added.	1	
	Q8 High specific heat - stays hotter for longer.	1	
	Q9 Heating bed - H ₂ O best. Has higher specific heat so stays hot for longer.	2	
Conclusion	States value of specific heat.	1	
		TOTAL	<u>18</u>
