

Essay Question: Evaluate the person's role and contribution before, during, and after World War One

### **Introduction**

World War One had begun on the 28th of July 1914, however America was not in battle as they were a neutral country, they were supporting allies Great Britain who had been massively impacted, by providing them with ammunition and services to get them through this time. April 6th, 1907 was when America had first impacted the war as they were bought in when the Germans were attacking supplies boat that were delivered to Great Britain as our Allies. As One boat was attacked many Americans were killed and injured. Then the Americans had turned negative to Germany which led to America to be involved in the First World War. However, America joined the War just in time to turn favour of our allies (Great Britain). Then America blitzed through German army to make the Germans surrender on the 11th of November 1919. [HN[SHS1] There were many people who helped impact the course of the war and Henry Ford was one of these. [Henry[HN[SHS2] Ford made a significant contribution impact towards Americas response before, during, and after World War One, on the contribution with America and the events that had occurred to stop World War. This essay talks about Why did Henry Ford impact Americas involvement in World War One? How did Henry Fords involvement impact World War one? What did Henry Ford's involvement Effect Americas response to World War One? And so on.

Henry Ford was one of the most influential individuals who shaped modern America.

Your essay shpuld not focus only on Ford's contribution to WW1. You need to discuss his influence on mass-production, his business ideas and the impact of the Model T.

### **Brief description**

Henry Ford was born in Dearborn, Michigan on the 30<sup>th</sup> of July 1863 to Sir William Ford Check you facts - who was a businessman to 'Ford' company. and Mary Litoget Ford who was a stay home mother who looked after the family. Henry Ford also had 4 other siblings, Margaret Ford, Jane Ford, William Ford JR, and Robert Ford. Henry Ford got his inspiration for to Mechanics when he was given a watch that he broke and fixed again at a young age. He then left home at age sixteen, to be an apprentice as a skilfully mechanist to operate on steam

trains, and service steam trains. He was then hired to Edison Illuminating Company, which is an electric company ~~back in the day~~, and ~~then~~ was promoted to chief engineer two years later.

You need to mention that he opened the Ford Motor Company in 1903.

He ~~then~~ provided his inventions and service towards helping Americas Allies and to produce services and ammunition to America to defeat the First World War. In the 1920's Henry Ford ~~then~~ begun making new car inventions at the Ford industry as they became super popular as he was producing a car every ten seconds, to sell for approximately 250 dollars a car. At 75 years of age Henry Ford was granted a German eagle, this was an honour created by Nazi Germany leader Adolf Hitler in 1937. This in 1947 on the 7<sup>th</sup> of April Henry Ford had then however passed away at 83 years of age to a Haemorrhagic stroke, (when blood from an artery begins bleeding into the brain). He was known significantly ever since for all his inventions and creations that he produced in the automobile mechanic industry.

### ***Body Paragraph: Assembly Line***

One of Henry Ford's greatest inventions/creations that impacted America before, during and after World War One was made, the Assembly line. Henry Ford ~~thought of this~~ idea revolutionised the assembly line when thousands of people wanted his cars and it would be too long to make all of theirs. Fords assembly line was created on October the 7<sup>th</sup> 1913, mainly to reduce time that it took to manufacture cars. ~~Therefore~~, this was very effective as it produced lots of jobs for Americans. Around 75,000 were in the workplace at one time, this mainly was for immigrants who were looking for jobs. Before the war the assembly line could produce one car in approximately ~~12HRS~~ 12 hours and a half, before the assembly line it was up to ~~24HRS~~ 24 hours. The assembly line produced up to 9,000 to -10,000 cars in one day valued at \$260 dollars each car. This effected America as ~~lots~~ more people could buy a car to travel around instead of taking the steam train. During World War One, Henry Ford's assembly line massively impacted America and their allies. Before America entered the war in 1907, American industries were ~~America were always involved in the World War, but they never entered until 1917. This was because America was~~ providing a Ammunition and services such as planes, bombers, ~~etc.~~ These were supplied by boatshipped to Great Britain over the Atlantic Ocean. ~~on the east side. Women mostly received their work on the Assembly line and in nursing in World War One as they didn't have a chance to help fight. This significantly impacted them afterwards as this helped to receive their 19<sup>th</sup> commandment on August 1920.~~ At the end of World War One Fords Assembly line helped produced a

massive, 86,865 completed aircrafts, 57,851 airplane engines, 4,291 military gliders, and thousands of generators. This shows how much of an impacts Fords assembly line had one the War. This ~~creation~~/invention is so significant because, without this assembly line the US ~~we~~ wouldn't be able to provide much ammunition and planes not just to us but our allies Great Britain as well, this is what made America so rich after the war. It also provided so much more work in the early life as more and more people got the opportunities to work for pay.

### ***Body Paragraph: Evolution of car***

Henry Ford's evolution of the automobile was a massive contribution and impact to Americas society before World War One. In 1896 Ford had created the first quadricycle which became instantly famous to America. Henry Ford then had opened his 'Ford' business on the 16<sup>th</sup> of June 1903 in Detroit, Michigan United States. A month later 'Ford' first car was created called the 'model a'. in 1929 over one million model as were sold as they had become extremely popular in the day in age. Towards 1908 Henry Ford had produced/~~created~~ one of the most successful cars ever, this was called the 'Model T'. ~~Everyone realised how effective these cars became as~~ over 15million had been produced in 1929 (14million more than Model A). ~~These cars became owned by a third of the population at this time as well.~~ Ford's cars impacted America in the way people used transport, and how to get to destinations. Later, 'Ford' business had become international to all other country's all over the world. This is significant as 'Ford' is still a massive company today ~~going to this day in age~~, as it produces millions more cars globally, and without the creation of the car people would still be travelling through steam trains for everyday life.

### ***Body Paragraph: Economic views***

Henry Ford ~~changed~~ impacted the way people worked in America and how much they earnt in their work~~place space~~. ~~Check your facts - Before World War One it was very Hard to find a job as well as how hard it was to get paid a decent amount in that job.~~ Henry Ford had changed this by his massive invention/~~creation~~ of the assembly line that he created in 1913, gave thousands of job opportunities to his factories. A total of 75,000 workers were involved on the assembly line at the time when usually it would only be less then a hundred. Henry Ford also changed the wage that people would get paid at his work. People would usually get paid at a total of \$2.34 a day. That is equivalent to \$66.85 in normal price today. This was all changed when Ford increased the price per person to \$5 a day. That is equivalent to \$142.85

at a normal price today. (This shows how much care he had for his workers). After this Fords next idea came into mind in the workplace when he created an eight-hour work day, for five days a week, to make a forty-hour week at the workplace. This gave workers the time to enjoy a break as well as a weekend. 'The Ford company' industry invented this in 1926 after the First World War. Fords contribution economically, effected America as civilians now can enjoy less work time and more pay, so that they can live a more happy and enjoyable life. This was so significant as this was the first pay rise ever in history. Without the pay rise and the workable hours, a week this provided people to then pay for more goods to be happy. It also provided parents to take care of their children a lot easier.

### **Body Paragraph: Political views**

~~Unnecessary - Henry Ford was a massive impact contribution before, during, and at the end of World War One, this includes his political views and involvement. Obviously, Fords contribution has already significantly impacted America during and after the war already, as he was the main reason of winning the War. As known Ford was a very famous person back then. And that was good as the country wanted Ford to be president. Ford was on the farming side as a politician, as farmers would get the most out of him. In 1920 Ford put a stop to "Ford for president" as it was developing very quickly.~~

Clarify this paragraph. Only talk about one specific idea. Ford was ~~also~~ against 'Union bashers'. Ford hired spies in his workshop to identify 'Union bashers', and if they were caught, they would get beaten up and lose their job. Ford even bought a charity hospital to provide money for colleges and schools which had taught trade to boy students. This shows that Ford didn't spend all his time and effort just on his business, but he also took care for others in the American society. This was so significant as Henry Ford changed lives of all Americans to get a good education.

### **Conclusion**

Henry Fords contribution to modern America ~~before, during, and after World War One~~ significantly impacted the way America is today. He accomplished many achievements and inventions such as how ~~we~~ travelled to places, how ~~we~~ worked in places, and how much money was earnt at work. Without his creations America most likely wouldn't win the First World War or be rich from supplying Ammunition to their Allies, Great Britain. All

inventions that he created hugely made an impact to the American society environment in this study period. ~~Back then this was a dream come true, but now we treat this as everyday life.~~ Without Henry Ford's inventions today inventions like cars, assembly lines ~~etc. it Wwould~~ not be possible without Henry Ford ~~finding it. inventing them~~ ~~These inventions that were talked about were.~~ The assembly line, as it controlled how fast products stuff ~~were as~~ made. Evolution of the car, as he changed the way people had travelled to destinations. The new 'Ford' car Business, that one third of the world had 'Ford' cars. The economic, as hours and wages became more helpful for American society. Ford's Impact on the war, as he leads to country to defeat. And Fords political views to change American society, as he created ds charity hospitals and helps farmers. Without all of Henry Ford's inventions/creations America would struggle in society. ~~An example of this would be 'Fords' company that still exists, and how it more successful than ever, or how cars are made from robots on an assembly line. This is why his contribution impacted America so much and why he is the most significant of everyone before, during, and after the First World War. Without him the world today would all be controlled by Germany as they were so close to winning the war. But Fords contribution significantly stopped the war by making Germany surrender. Without Henry Ford, America would have struggled a lot in life without his creative, useful inventions. He made it a lot easier to do activity's and how things were made. Henry Ford was and is the most contributed before, during and after World War One from his significant inventions, creations, and ideas.~~
