

Name: _____

Class: _____

ACTIVITY SHEET

4.1 Crossword puzzle

Use the clues to complete the crossword.

Across

- 1 Heat absorbed in a reaction at a constant pressure
- 5 Equation in which both sides have equal numbers of each type of atom
- 8 Occurs when old substances are transformed into new ones
- 9 Type of equation that describes a reaction using chemical symbols
- 10 New substances formed in a chemical reaction
- 11 Type of conservation law that states energy cannot be created or destroyed, only transformed
- 15 Type of equation that includes both chemicals and energy change
- 16 Type of heat capacity needed to raise temperature of 1 gram by 1 degree K
- 17 Type of reaction that occurs when oxygen reacts with a fuel to give an oxide
- 18 Type of ion that does not participate in a reaction
- 19 Type of equation that specifies all ions involved in a reaction

20 Type of reaction that occurs at room temperature

22 Electrostatic forces of attraction holding atoms together

Down

1 Type of reaction that releases heat

2 Type of energy released when a fuel undergoes complete combustion

3 Type of reaction that requires energy to sustain it

4 Type of conservation law in which the number of each type of atom is the same before as after

6 Type of reaction that occurs when a compound breaks down into simpler chemicals

7 Type of reaction that occurs when atoms of two or more elements combine

12 Old substances consumed in a chemical reaction

13 Type of ion that takes part in a reaction

14 Type of equation describing a reaction using words

16 Atoms, ions and molecules involved in a reaction

21 Type of ionic equation that excludes any spectator ions
