ACTIVITY SHEET

4.3 Interpreting enthalpy tasks

The graphs below show the enthalpy changes that can occur during a chemical reaction.

- 1 For each graph, complete the following tasks.
 - a Identify and label the 'Energy of reactants' and 'Energy of products'.
 - b On the y -axis, label the energy of reactants and products as E_R and E_P respectively.
 - c Identify and label the change in enthalpy, ΔH .
 - d Indicate whether the enthalpy change is positive or negative.
 - e Decide whether the graph is showing an exothermic or endothermic reaction and give the graph a title.
- 2 Explain what the hump on each graph shows.
