

## Chocolate Box

Aim = Design a chocolate box that can fit 24 chocolate measured at  $2 \times 1.5 \times 1 \text{ cm}^2$  ( $l \times w \times h$ ).

Method = I used a base of  $6 \times 4 = 24$  and equalled to  $12 \text{ cm}^2$  in length  $6 \text{ cm}^2$  in width and  $1 \text{ cm}^2$  for the sides and another one cm to give the sides some support.

The lid is  $6 \times 4$  as the base with tabs  $1 \text{ cm}^2$  wide, in length it is  $12 \text{ cm}$  and  $6 \text{ cm}$  wide.

List Before I complete this task I need to know

- How many chocolates <sup>there</sup> their needs to be? 24 ✓
- How big each chocolate needs to be?  $2 \times 1.5 \times 1$  ✓
- How many layers of chocolate's does there need to be? 1 ✓
- How much does it cost? \$15.00 per metre<sup>2</sup>, \$7.50 per 500  $\text{cm}^2$ , \$3.75 per 250  $\text{cm}^2$ . ✓

## Conclusion

In the report we designed a chocolate box to fit 24 chocolates in side at the size of  $2 \text{ cm} \times 1.5 \times 1 \text{ cm}^2$ .

To make this chocolate box it will cost \$3.15 at 2015 per  $\text{cm}^2$  (?)
