1.	In a kitchen, some food is stored at -18°C in a freezer and some at 4°C in the fridge. A roast is cooking in the oven at a temperature of 180°C.  Before answering each of the following questions, draw a number line to show the positions of the temperatures.
a)	What is the difference in temperature between the food stored in the freezer and the food stored in the fridge? (Hint: Difference = largest value – smallest value) $4 - -18$ $= 22^{\circ}\text{C}$
b)	What is the difference in temperature between the food stored in the fridge and the roast cooking in the oven? $180 - 4^{\circ}\text{C}$ $= 176^{\circ}\text{C}$
c)	What is the difference in temperature between the food stored in the freezer and the roast cooking in the oven? $180 - -18$ $= 198^{\circ}\text{C}$
