

Draw the graph of $y = 6 - 2x$.

To find y , multiply x by two and subtract from six.

Draw the graph of $y = 7 - x$.

To find y , subtract x from seven.

Draw the graphs of $x = 7$, $x = 3$,

$y = 4$, and $y = -2$.

When $y = 9$, what is x ?

Draw the graph of $y = x - 4$.

To find y , subtract four from x .

Draw the graphs of $y = 2x + 4$ and $y = 2x - 3$.

Deal with each graph separately, but draw them both on the same set of axes. Remember to label which is which!

Draw the graph of $y = x$.

The y value is the same as the x value.

On the same axes, draw and label the line $y = 1$.

Draw the graph of $y = 2x$.

To find y , multiply x by two.

Draw the graph of $y = 3x - 2$.

To find y , multiply x by three then subtract two.
