

Find the area of these kites.

$$A = \frac{1}{2}xy$$

Calc: $0.5 \times 32 \times 45 =$
 $= \frac{1}{2} \times 32 \times 45$

$$A = 720 \text{ cm}^2$$

Example

Find the area in cm^2 . Change all the lengths that aren't in cm, to cm, before you multiply them.

13

$$A = \frac{1}{2}xy$$

$$= \frac{1}{2} \times \square \times \square$$

$$A = \square \text{ cm}^2$$

14

15

16

Join the dots to form a kite and measure the axis lengths in cm to 1 d.p. Then calculate the area in cm^2 . Give the area to 1 decimal place.

13

Measure the axes not the sides!

14

1

$$A = \frac{1}{2}xy$$

$$= \frac{1}{2} \times \square \times \square$$

$$A = \square \text{ cm}^2$$

2

$$A = \frac{1}{2}xy$$

3

4

From Q.5 all units are in cm.

5

$$A = \frac{1}{2}xy$$

$$= \frac{1}{2} \times \square \times \square$$

$$A = \square \text{ cm}^2$$

6

7

8

Find the area of these parallelograms.

Example

$$A = bh$$

$$= 17 \times 8$$

$$A = 136 \text{ cm}^2$$

1

$$A = bh$$

$$= \square \times \square$$

$$A = \square \text{ cm}^2$$

2

$$A = bh$$

$$= \square \times \square$$

$$A = \square$$

Remember square units

3

$$A = bh$$

4

$$A = bh$$

5

6

7

8

Find the area, rounding your answer to 1 d.p.

9

$$A = bh$$

Square units to 1 d.p.

11

10

12

Find the area in cm^2 . Change all the lengths that aren't in cm, to cm, before you multiply them.

13

$$A = bh$$

$$= \square \times \square$$

$$A = \square \text{ cm}^2$$

14

15

16
