Chevron Frame by Mercedes Hutchens

<http://www.teacherspayteachers.com/Store/Mercedes-Hutchens>

Instructions

Print or copy page 3 and 4 double sided.

Place the paper so the examples are face down.

Cut along the dotted lines to create flaps.

Fold the paper in half with the examples inside.

Glue the foldable into notes or on a piece of construction paper.

Go through the foldable with your students.

**Comparing
Medians**

**Comparing
Ranges**

**Comparing
Inter-quartile
Ranges**

Comparing Medians

The median is the value exactly in the middle of a set of data.

- 1) The distribution of two periods final exam scores are shown below. Which class had a larger median?

- 2) The distribution of the points scored by two basketball teams in their last ten games is shown below. Which team had a smaller median?

Comparing Ranges

The range is the difference between the maximum and minimum values in a set of data.

- 3) The annual incomes of two professions are shown below. Which profession has a larger range?

- 4) The minutes per class two students studied for is shown below. Which person had a larger range?

Comparing Inter-quartile Ranges

The inter-quartile range is the difference between the third quartile and the first quartile.

- 5) The heights of high school athletes are shown below. Which type of athlete has a larger inter-quartile range?

- 6) The distribution midterm exam scores are shown below. Which gender had a larger inter-quartile range?
