☐ True
☐ False

6 Match the ages with the correct stage of motor skill development.

a Ages 0–2	i Running, skipping, throwing, catching, hitting (such as in tennis), swimming, balancing
b Ages 2–6	ii Development of specialised skills for particular sports, such as for gymnastics, athletics, football (goal kicker), netball (goal defence)
c Ages 7–10	iii Sitting, crawling, standing, walking
d Age 11–12	iv Combining movements and skills and higher level performance in ball games, dance, aerobics

7 Social development is not fundamental to human behaviour and development.

☐ True

☐ False

8 Vygotsky argued that:

A children learn from others who have less knowledge than themselves.

B children learn from others who have more knowledge than themselves.

C children learn from others who are the same gender as themselves.

D children learn from others who are younger than themselves.

9 Researchers have tried to determine the extent to which our development is caused by what we inherit genetically from our parents and what is the result of environmental influences, both physical and social, in our world. This is called the _____ debate.

10 Identical twins develop from two separate fertilised eggs that develop in the womb at the same time.

☐ True

☐ False

Review questions answers

- 1 human development
- 2 D
- 3 D
- 4 a ii; b iii; c i
- 5 True
- 6 a iii; b i; c iv; d ii
- 7 False
- 8 B
- 9 nature/nurture debate
- 10 False
